

ACI Network Token Support

Merchant Benefits

- Enables merchants to pursue multi-acquiring
 - ACI is the network token requestor on behalf of merchants and can authorize transactions via any acquirer using the network tokens
 - Reduces interchange rates for card on file (COF) transactions
 - As of April 2022, Visa will increase interchange rates for card not present (CNP) transactions with a PAN
 - Increases security
 - PANs are never in the clear
 - Each new transaction is accompanied by a cryptogram for added security
 - Network token fraud screening is performed up front during provisioning, which removes the need to screen for fraud during card-on-file transactions
 - Visa reports fraud rates declining 28%* when network tokens are used
 - Reduction in declines when using network tokens
 - Visa reports 2.2%* authorization uptick for using network tokens over PANs
 - Increases conversion as network token-initiated transactions are typically authorized even if the card is expired, lost or stolen
-

How It Works

ACI will request a network token on behalf of the merchant during transaction processing and associate the network token to the merchant's ACI issued omni-token. Subsequent transactions will utilize the associated network token for authorization.

ACI Worldwide is a global leader in mission-critical, real-time payments software. Our proven, secure and scalable software solutions enable leading corporations, fintechs and financial disruptors to process and manage digital payments, power omni-commerce payments, present and process bill payments, and manage fraud and risk. We combine our global footprint with a local presence to drive the real-time digital transformation of payments and commerce.
